

CHINOOK DATA ANALYSIS

The Chinook dataset represents a digital media store (like iTunes) with data spanning customers, employees, invoices, and music tracks. [1, 2, 3, 4]

1. Sales & Revenue Performance Report

- **Total Revenue Trends:** Track monthly and yearly gross sales to find growth patterns.
 - **Geographic Sales Heatmap:** Map sales performance by customer `BillingCountry` and `BillingCity` to locate top markets (e.g., USA vs. Canada).
 - **Invoice Value Analysis:** Calculate average order value (AOV) by dividing total sales by total invoice counts.
-

2. Customer Insights & Engagement Report

- **Top-Spending Customers:** Rank customers by total lifetime value (LTV) to find your highest-value clients.
 - **Customer Acquisition by Country:** Count unique customers per country to see where your user base is growing.
 - **Support/Sales Representative Performance:** Link employees to customers to track which sales support agents generate the most revenue. [5]
-

3. Product & Inventory Optimization Report

- **Most Popular Genres:** Rank total tracks sold by `Genre` (e.g., Rock vs. Jazz) to understand customer preferences.
- **Top-Selling Artists & Tracks:** Identify which musicians and songs drive the most sales volume.
- **Media Type Preferences:** Compare sales of MPEG audio files against AAC or protected formats to optimize digital inventory.
